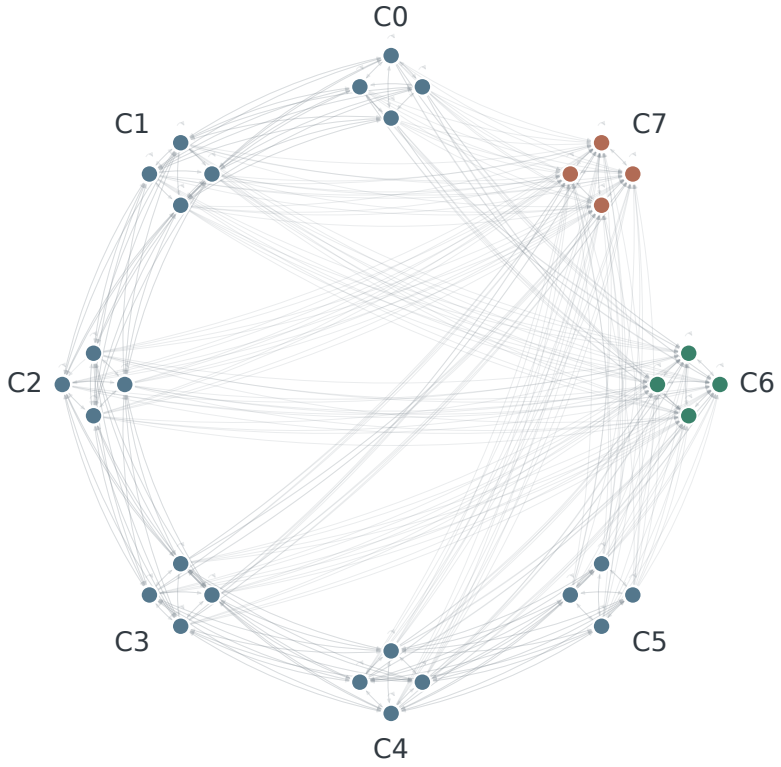
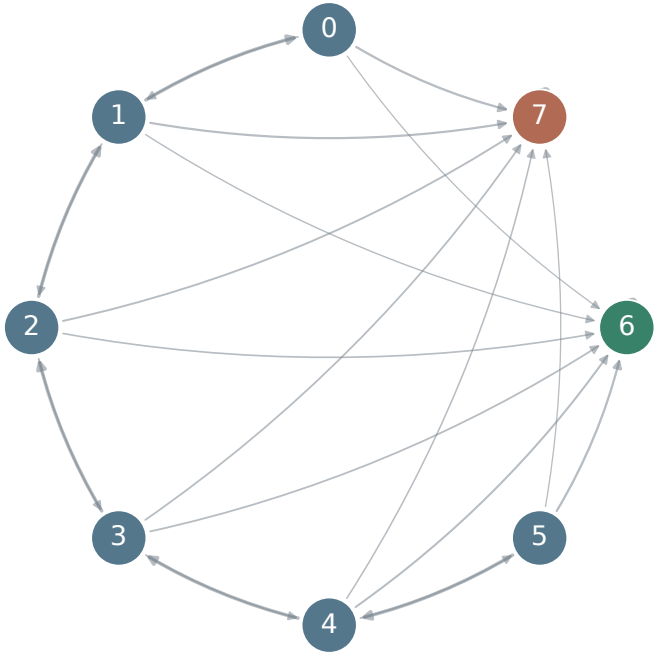
Different states, the same specified future behavior

Original: 32 states, 479 edges



Quotient: 8 states, 30 edges



Measured trust mechanism, seed 10000, no perturbation. 4x state reduction.

Every nonzero edge is shown. Original edge widths: 0.15 + 0.5p; quotient: 0.4 + 3p. Layout groups the audited classes.

Blue: active. Green: complete. Brown: disengage. Serialized quotient one-step error: 0. Synthetic model only.
