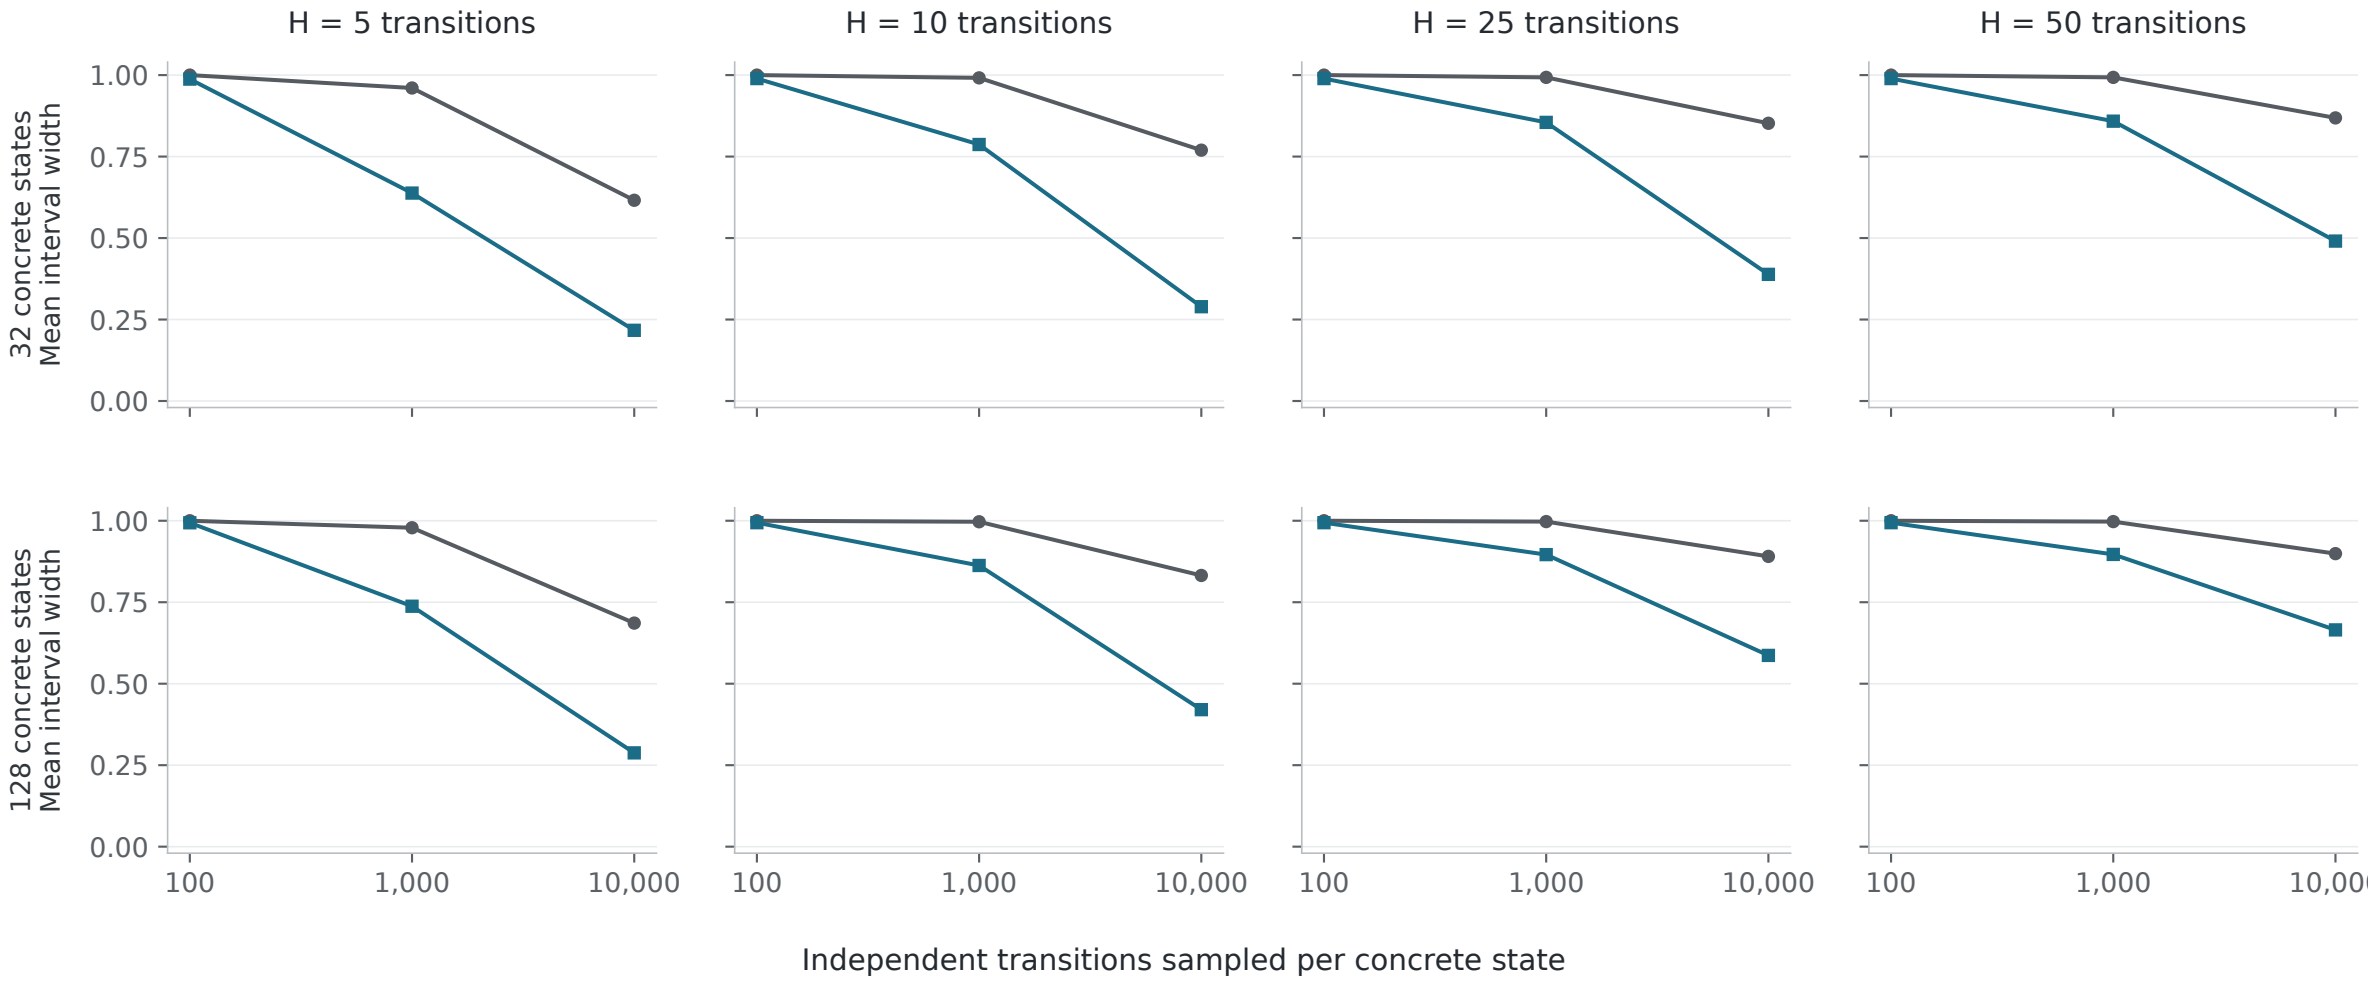
Verified intervals can remain wide

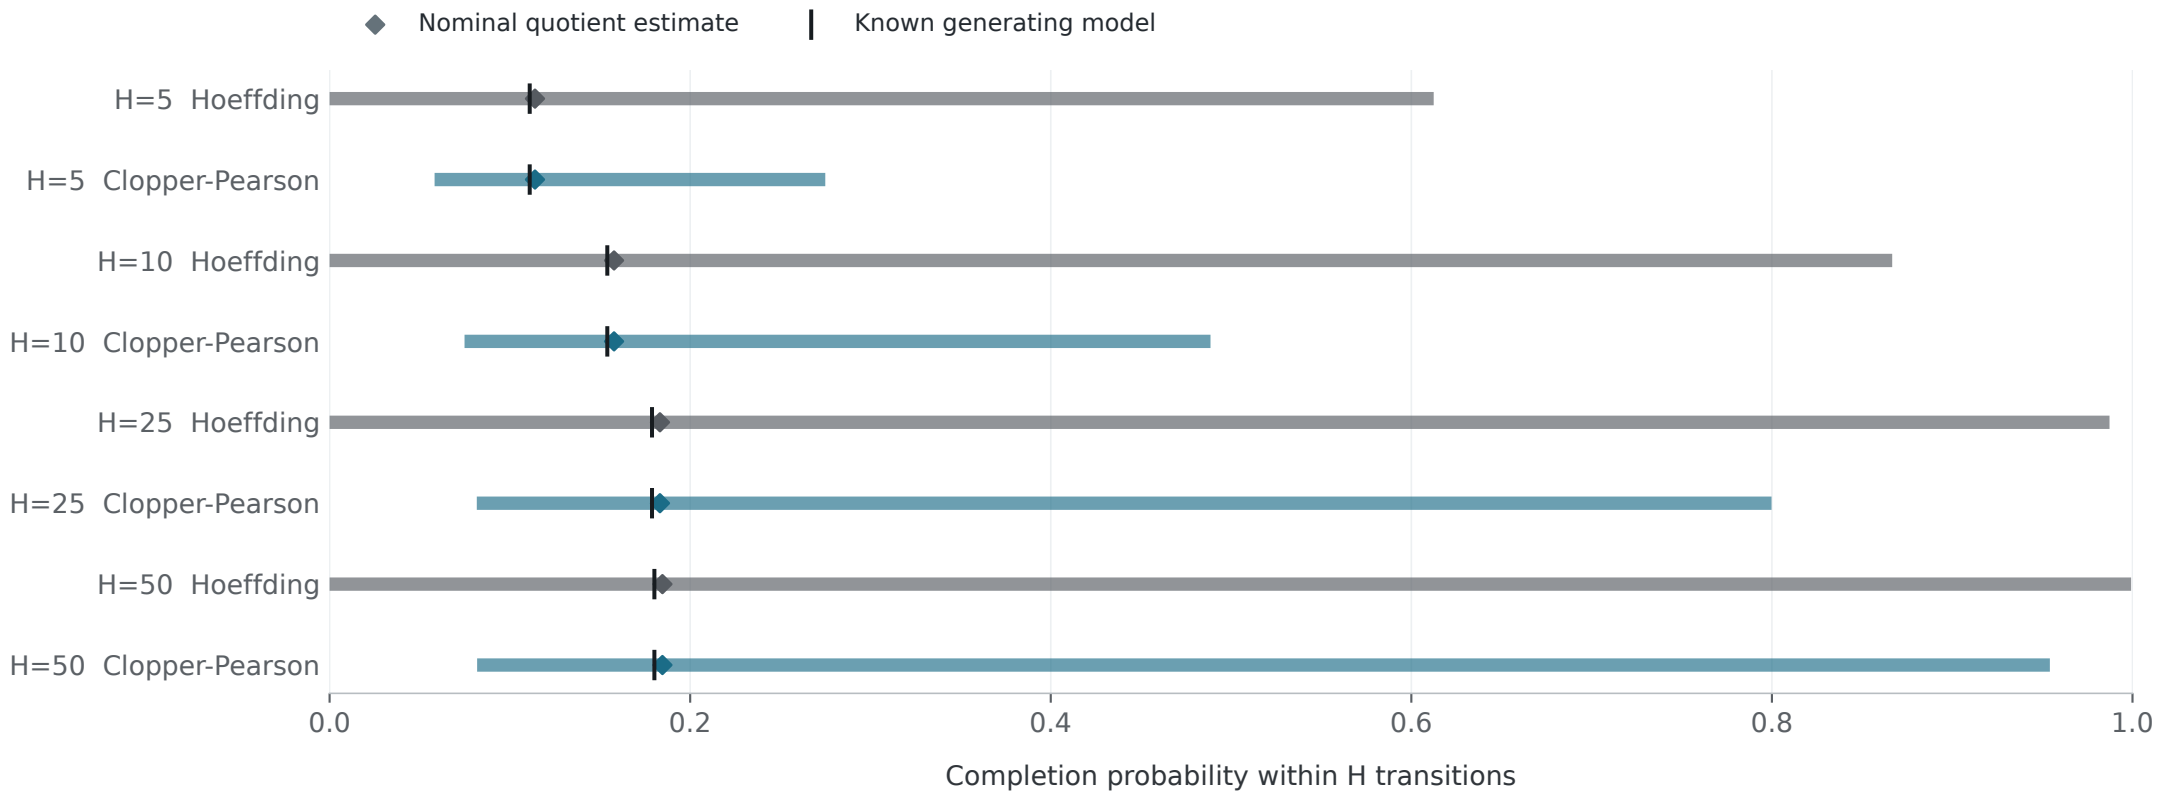
Completion reachability: means over 100 synthetic worlds per model size



200 worlds; 600 paired transition datasets. Rectangular uncertainty envelope includes state abstraction.
Means only; paired world-bootstrap comparisons are in the source report. Synthetic model bounds, not human guarantees.

A fixed synthetic example: nominal predictions and verified ranges

Trust-family world, 128 states, seed 20000; 10,000 sampled transitions per row; concrete origin 0.



Intervals include hidden-state and transition uncertainty. No additional nominal abstraction allowance is added.
Known-model marker uses integer-enclosure midpoints. Clopper-Pearson quantiles remain floating. No human prediction claim.
